## EV BLOCK MINI & EVT PEDESTAL RANGE

FUTURE-PROOFING YOUR EV INSTALLATIONS WITH AN AWARD WINNING MULTIPLATE DESIGN.

### SINGLE OR DUAL MOUNTED UNIVERSAL CHARGER SUPPORT

Whatever the required chargers, our clever modular system supports over 20 chargers and counting in either double or single formation, including Easee, Hypervolt, Zappi, Tesla, CTEK, Zaptec, Siemens, PodPoint and many more.

Just choose the relevant mounting plate and our clever universal pedestal mounting points will take care of the rest. Chargers can also be changed or replaced in the future by simply attaching the appropriate mounting plate, leaving the original pedestal in place.

### CABLE HOOK & HOLSTER ACCESSORIES FOR FURTHER PRACTICALITY.

Our continually expanding range of accessories are making installers' lives ever easier. This family of purpose built accessories include our EV Tower cable hooks and Type-2 plug holsters, which can be mounted on two sides of our Premium pedestal, further demonstrating the versatile potential of our modular system.

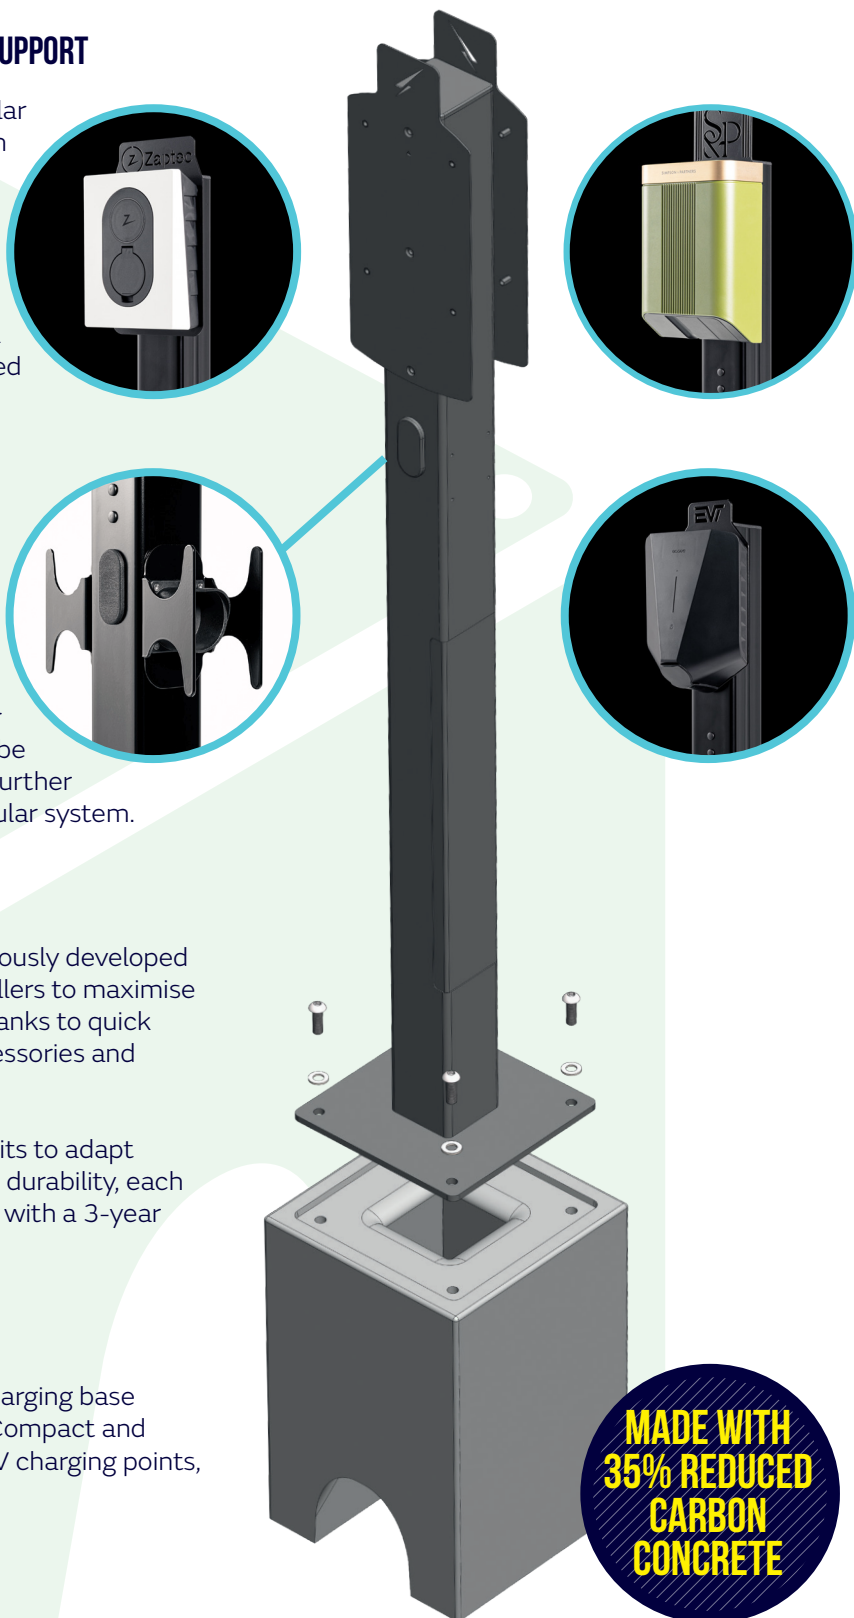

### MODULAR DESIGN. FUTUREPROOF YOUR INSTALL.

The EV-Tower flagship pedestal has been meticulously developed with ease of installation in mind. This allows installers to maximise efficiency and minimise costs to the customer, thanks to quick cable access, a range of available easy-to-fit accessories and high quality.

EV-Towers' flexible modular system allows the units to adapt to changing conditions in the future. Produced for durability, each pole is weather resistant and built to last, coming with a 3-year warranty as standard.

### EV BLOCK MINI

The EV Block Mini is an innovative concrete EV charging base that is designed to be paired with the EV-Tower. Compact and hard-wearing, you can quickly and easily install EV charging points, even when space is at a premium.
